

HMIS READY RECKONER

A Handbook for HMIS Users

MINISTRY OF HEALTH AND FAMILY WELFARE
HMIS Unit, Statistics Division

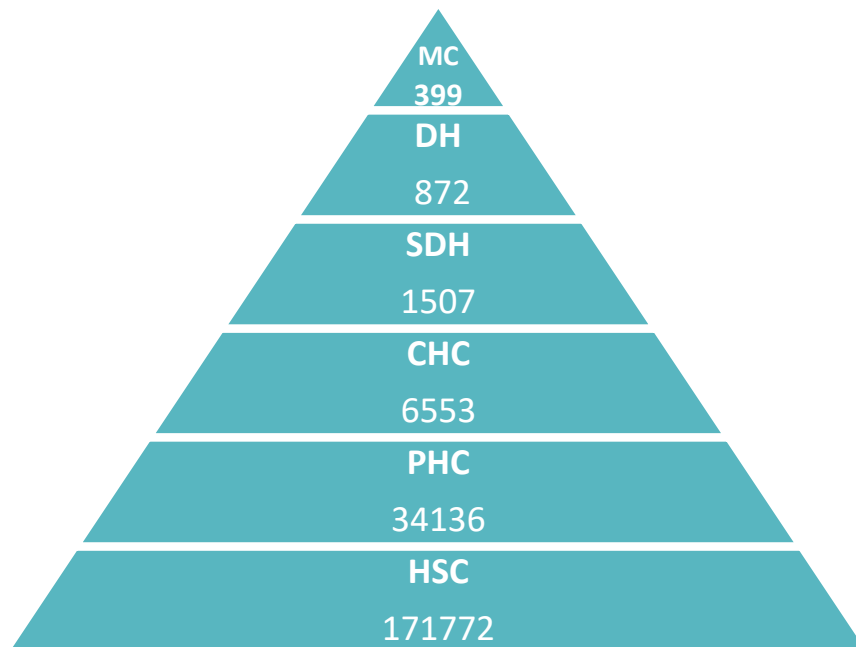

Background

- HMIS (Health Management Information System) of Ministry of Health & Family Welfare (MoHFW), Government of India, is a Web Based Information System.
- 2.50 Lakhs Government (Public)/ State-owned / Central / Private / Others equivalent Health Facilities including HWC-SC (Health and Wellness Centre

Sub Centre), HWC-
PHC (Health and
Wellness Centre
Primary Health
Centre), CHC
(Community Health

Centre), SDH (Sub District/ Taluka Hospital), DH (District Hospital) and MC (Medical College) report data regularly on HMIS portal on monthly basis.

Public Health Facilities Type wise (2.15 Lakhs)

- The data entered on this portal relates to Services provided by the facility (Service Delivery Data) and the availability of Infrastructure & Human Resources (Infrastructure & HR Data) at the facility.
- HMIS data helps in planning, management and decision-making by allowing facility grading and performance evaluation of the programmes/ schemes using various indicators at Block, District, State as well as National Level.
- HMIS is the gateway to provide an array of health indicators in India.

Story of HMIS

- Prior to the launch of HMIS, the data related to “Health Services” being provided by any health facility under various programmes/ schemes was gathered programme wise through the hard copy formats or Excel sheets maintained by the health facility, blocks, districts, state etc. These were sent to respective higher level Programme Management Units like Block, District, State and National Levels for usage.
- With the advent of National Rural Health Mission(NRHM) in 2005 and its vision to work as an umbrella for all the vertical schemes, it was envisaged to have a unified reporting and monitoring mechanism where data on important key indicators could be uploaded at one place and be made available to concerned stakeholders.

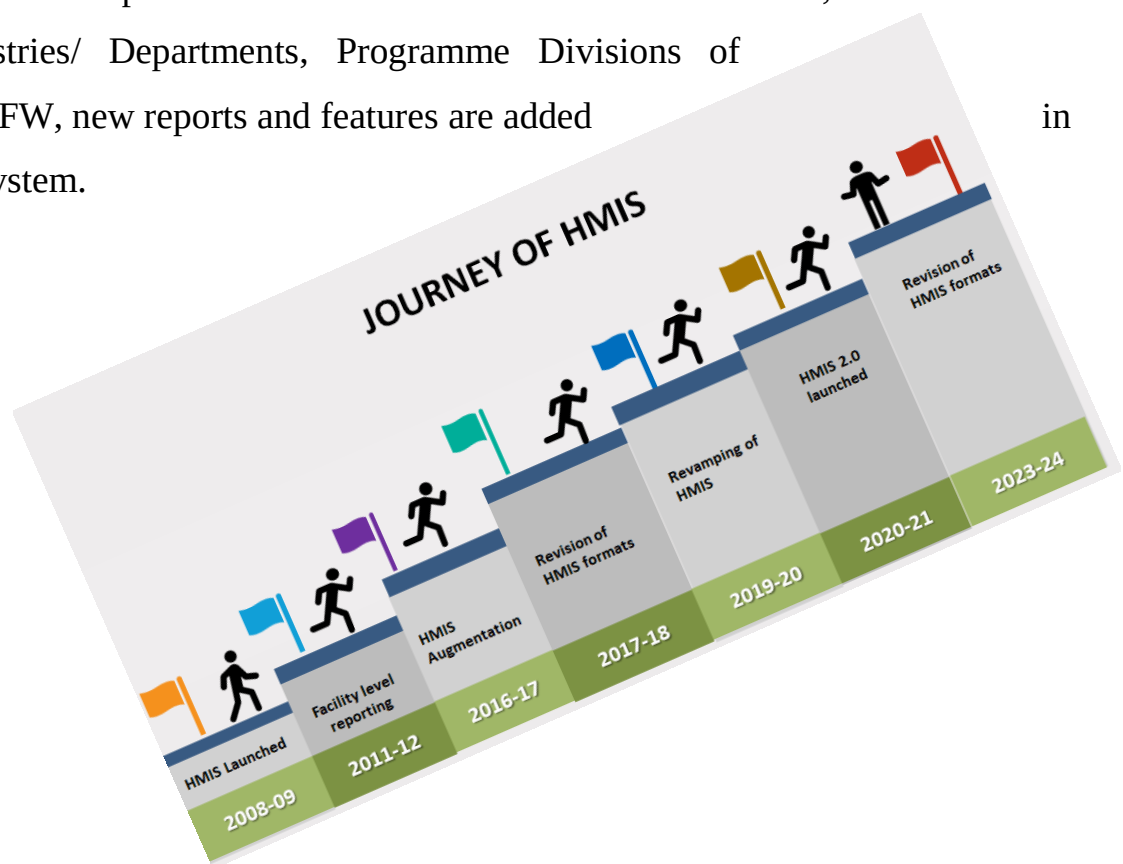

***This one place was the HMIS portal of MoHFW
(hmis.mohfw.gov.in).***

- After the successful launch of NRHM in 2005, MoHFW launched the HMIS portal during 2008 with a vision to capture the health service delivery data for the entire country on one unified platform. The system started with district level data capturing initially in 2008. In a span of 2-3 years, the system upscaled to facility level data collection.
- Gradually with the launch of National Urban Health Mission (NUHM) and merging of NRHM and NUHM to National Health Mission (NHM), the HMIS system was constantly upgraded to facilitate monitoring of the programmes and schemes under the missions. Around 1.5 lakh facilities from across the

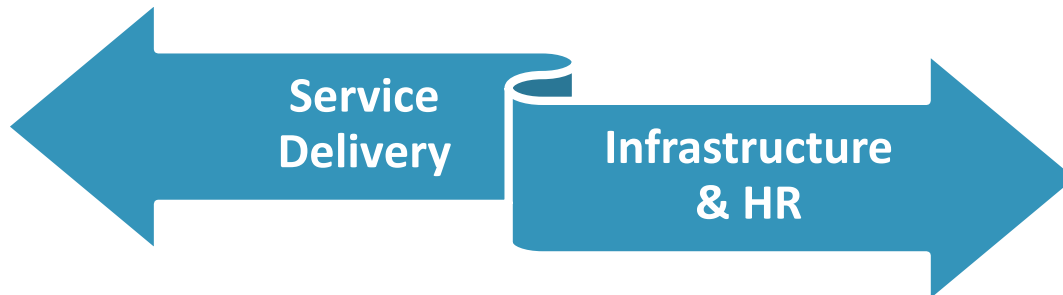

country started reporting data on the HMIS portal in 2011-12 on monthly basis. This number has now grown to 2.50 lakh facilities.

- HMIS portal has been regularly updated to keep pace with the upgrading technology, requirements of stakeholders and new programmes/ schemes launched under the National Health Mission.
 - The upgraded HMIS 2.0 was launched in 2020 and made functional since April 2020.
 - Data capturing formats have been updated twice since inception, to include new schemes / programmes of MoHFW and the requirement of concerned Ministries/ Departments. The revision was done initially in 2017-18 and recently in 2023-24
- Based on inputs from the stakeholders like States/UTs, Other Central Ministries/ Departments, Programme Divisions of MoHFW, new reports and features are added in the system.

Inputs to HMIS

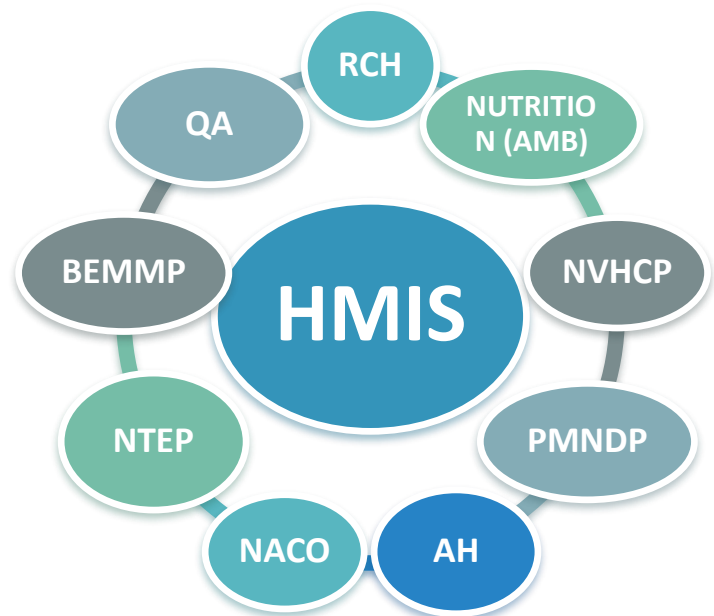

Two types of data are majorly captured in HMIS

Service Delivery

HMIS collects data on Service delivery for all the major programmes/ schemes of NHM, which include

- RCH (Services related to Pregnant Women and Children)
- Family Planning (Acceptors of different methods of sterilization, follow-up and complications if any)
- Nutrition (Anaemia Mukh Bharat, IYCF)
- NVHCP- National Viral Hepatitis Control Program (Testing and Management)
- PMNDP- Pradhan Mantri National Dialysis Program (Dialysis done)
- NTEP- National Tuberculosis Elimination Program (TB Testing and Treatment)

- NACO- National AIDS Control. Organization (HIV Tests)
- BEMMP- Biomedical Equipment Management and Maintenance Program (Bio medical equipment maintenance)
- Quality Assurance etc.

Infrastructure & Human Resources

The infrastructure format of HMIS is based on IPHS 2022 format. All the essential and desirable data elements is being captured on the HMIS portal monthly to the following major heads.

- Physical Infrastructure,
- Services,
- Biomedical Equipment,
- Governance,
- Human Resource,
- Quality Control and
- Sujalam Campaign

HMIS Nodal Person

The person
collecting &
entering HMIS
data

WHO IS THE HMIS NODAL PERSON AT HEALTH FACILITY ?

HMIS Nodal person, responsible for collecting and entering the data; may be Data Entry Operator, Officials of MRD (Medical Record Department), Auxiliary Nurse & Midwife (ANM), Staff Nurse, Pharmacist or any other staff member.

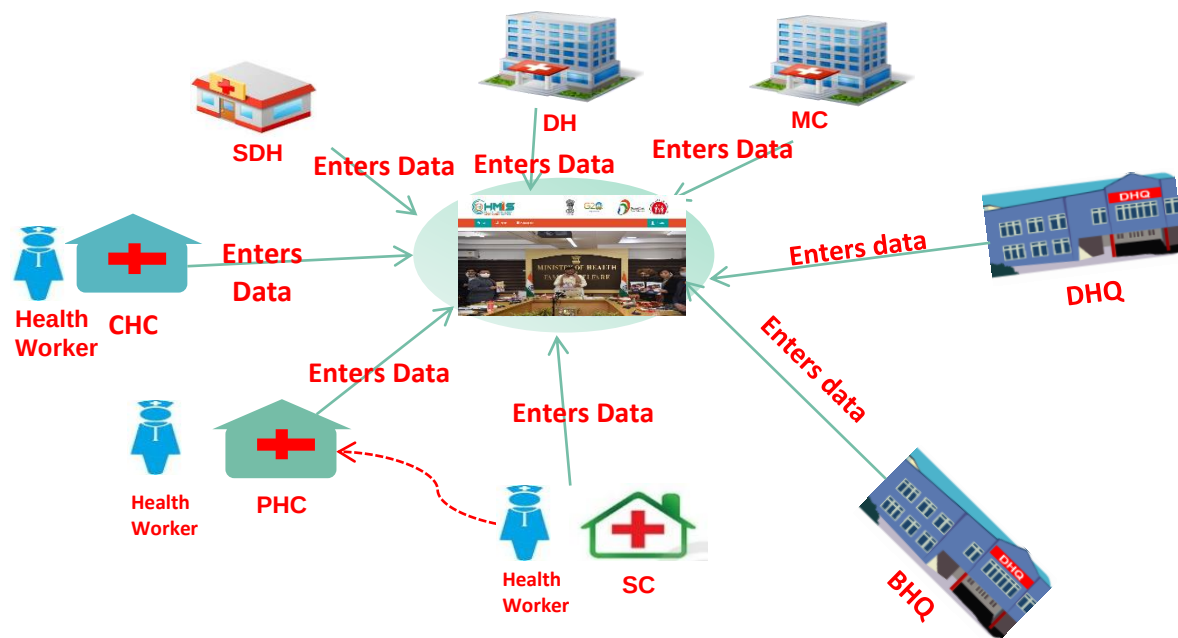

HMIS Nodal person is responsible for

- ✓ Collection of data (varies from facility to facility)
- ✓ Uploading the data pertaining to Service Delivery and Infrastructure into HMIS portal.

HMIS Data Flow

HOW DOES DATA FLOW FROM FACILITY TO HMIS?

The data flows from all the health facilities into the HMIS portal directly.

User Credentials i.e a User ID and a corresponding password have been provided to all the health facilities. They need to login to the HMIS portal (<https://hmis.mohfw.gov.in>) and upload data directly into the HMIS portal. All health facilities along with District Head Quarter, Block Head Quarter upload their relevant data on the portal.

WHAT HAPPENS TO THE DATA ENTERED IN HMIS?

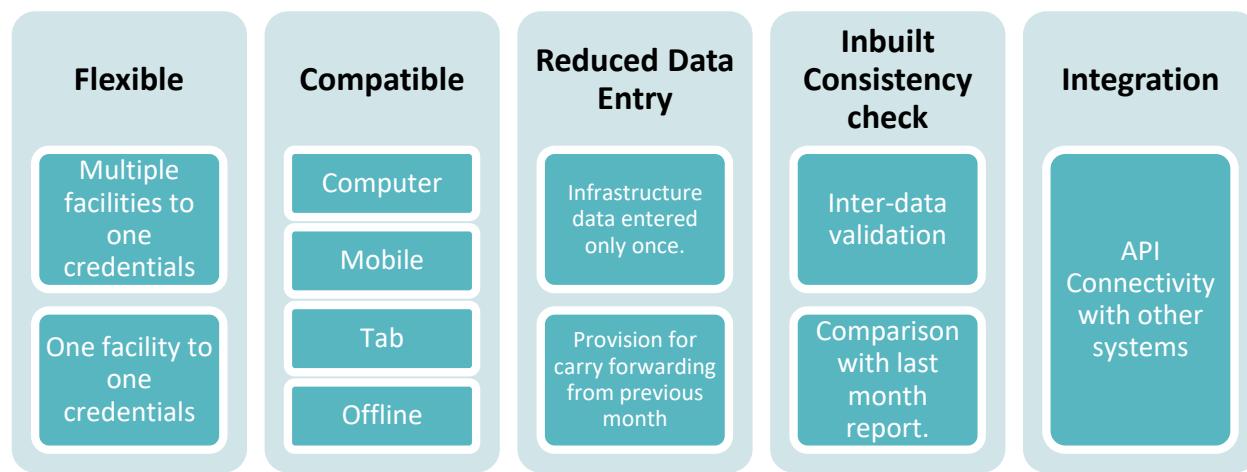

- After collecting/ capturing the data, it gets aggregated and analysed for various health indicators related to themes i.e Maternal Health, Child Health, Immunization, Family Planning, Adolescent Health, Nutrition, NVBDCP, PMNDP, NCDs, Non-Communicable Diseases, NVHCP, Patient Services like OPD, IPD, Lab Tests etc.
- The aggregation is also done at different levels like Block, District, State and National Level. Health indicators generated from HMIS data facilitate the government to develop evidence-based policies, identify areas for improvement and monitor progress towards achieving the health goals.
- The data uploaded on HMIS portal helps to create a comprehensive database of health-related information that can be used by policymakers, health officials, researchers and other stakeholders to make informed decisions about healthcare in India.

In a nutshell, the person gathering and entering the data i.e. the HMIS nodal person plays a crucial role in uploading data into India's HMIS to support evidence-based decision-making and improve health outcomes for the population.

Key Features of HMIS

Data Entry

Reporting

- **GIS**
 - Representation of HMIS data on Geo spatial layers
 - Layers available up to road, village boundary.
- **DASHBOARD**
 - Interactive Dashboards Programme wise
 - Options for choosing State, Districts, Period as per the choice of the user.
 - Important key indicators on ANC, Deliveries, Immunization, Family Planning, OPD, IPD, Service Delivery, Morbidity, Mortality
- **STANDARD REPORTS**
 - Across States
 - Across Districts
 - Across sub districts

- **REAL TIME REPORTS**

- Data reporting status
- Data items report
- Key HMIS report
- Min-Max
- Range report

Other Features

E-training	LGD & NIN	Health Hierarchy	Regular Training	Robust Data Quality
•Profile Update •Data Entry	•All geography LGD Compliant •All health facilities have NIN	•State specific Hierarchy •Health Blocks •Sub Division •Health Agency	•National Workshop •Regional Workshop •New Features •Data Quality •Data Usage	•Regular Feedback to State/ UTs •Data Quality Workshops •Physical verification of Data

Essential Requirements for Data entry on HMIS

✓ Hardware (Functional Computer, Desktop, Laptop, Tab, Mobile)

✓ Software (Windows, MS Office)

✓ Trained Human Resource (person who is well versed with computer usage & internet)

✓ Connectivity (Internet)

✓ Facility specific user credentials (User Id and Password for logging in to the portal)

Important Modules in HMIS

1. Data Entry

The URL to access the HMIS portal is <https://hmis.mohfw.gov.in>

1. The following screen would appear

2. Click on login

3. Enter the assigned User name, Password and Captcha

The screenshot shows the login page of the HMIS portal. The page has a header with the HMIS logo, the Government of India emblem, G20 India 2023 logo, Digital India logo, and the National Health Mission logo. Below the header, there is a navigation bar with links for 'HOME', 'About Us', 'Contact Us', and 'Publications'. The main content area is divided into two sections. On the left, there is a section for the 'Ministry of Health and Family Welfare, Government of India' with the HMIS logo. On the right, there is a 'SIGN IN' section with a form. The form has fields for 'User Name', 'Password', and 'Enter Captcha'. There is a 'Refresh' button next to the captcha field. At the bottom of the form, there is a 'SIGN IN' button.

4. Choose the Data entry option for which you need to enter the data:

- i. **Monthly Service Delivery**
- ii. **Infrastructure & HR**

Monthly Service Delivery

The data entry for Monthly Service Delivery screen provides the following information:

Monthly Service Delivery

Facility Name: Panaji uhc Facility Type: Hwc-phc/phc User Id: hm30gon0086 Ward / Area: Not available
City / Community: Panaji (5611) District: Niswadi (5611) State: Goa (30)

Reporting Month: May-2023 Program Division: All Program Sub-Category: All Document Number: 30-551-5511-0-3778314454-952023-M

Please enter the data accurately and check before submission

Part-A M1 Part-A M2-M4 Part-A M5-M8 Part-A M9-M10 Part-A M11-M13 Part-B M14 Part-B M15 Part-C M16-M17

Indicator Number	Indicator Name	May-2023	Remarks
Part-A	REPRODUCTIVE AND CHILD HEALTH	In-Facility Outreach Total	

- i. **Complete detail** of the health facility (Facility Name, Facility type, User Id and its mapping from the lower level to the State/ UT)
- ii. **Reporting month**- Month for which reporting is being done
- iii. **Document number**- This is the system-generated number and consists of a combination in order of State code, District code, Sub-district code, Facility NIN number, month & year of the data entry for monthly service delivery format.
- iv. **Programme Division and Programme Sub-sections** and part-wise data entry options.
- v. **Options for in-facility and outreach** data entry for the services given at respective levels viz. in the facility and Outreach.

Various other options like Print, Export Excel, Preview and Submit Options are also available on the screen. Anyone can use these options as per the requirement. After entering the complete data, it is recommended to preview the data before submitting it. The following message will appear on the screen on submitting the data:

- If Data Entry Operator chooses “**Yes**” then wait for the message “**submission successful**”, it means the entered data is saved successfully. If Data Entry Operator chooses “**No**”, the system allows further changes in the data entry process.
- Data Entry Operators are recommended to get the signature of the facility in-charge on the final submitted HMIS data in the printed form every month. The

will reduce data entry errors and facility in-charge will also be aware of the final data submitted for the reporting month.

Infrastructure & HR

Facility user has to enter the “Infrastructure & HR data” once at the starting of the financial year i.e. April, after that the data can be forwarded and necessary updation can be done in this data every month. Since the data elements of Infrastructure are

2. Reports

This module helps the users to generate the reports based on the data entered in HMIS portal. Two types of reports are available at facility login:

Standard Reports

(Ready to Download Reports in excel format)

Real Time Reports

(Query based customized Reports)

Standard Reports:

These reports are ready to use excel files in fixed pre-defined formats based on user requests.

Options available in Standard Reports

- ✓ Across States
- ✓ Across Districts
- ✓ Across Months

3. Modules not available for facility level users

a. Manage Health Facility

This module provides complete and comprehensive information about health facility mapping. Modifications, if any in the following information regarding the Health Facility, can be done only at higher levels i.e. State and District level using this module. If any changes are required to be done in the details related your facility, you may inform the district official about the same.

- **Health Facility Type** (HWC-SC/ SC, HWC-PHC/PHC, CHC, SDH, DH, Medical College)
- **Name of the facility**
- **Date of enrollment**
- **Status** (Open, Closed, Deleted)
- **Facility NIN**
- **State, District, Sub-District, Block, Health Block, Sub-Division, Urban/Rural, Village, Village Panchayat.**
- **Population Covered**
- **Sanctioned Bed Count & Functional Bed Count**
- **Area Category** (Plain Area, Hilly Area, Tribal Area, Desert, Riverine, Coastal Area)

- **Area Covered** (Sq. Kms)
- **Parliamentary Constituency**
- **Local Assembly Constituency**
- **Facility Category** (24*7, FRU, Delivery point, to be graded/ ranked, Under Health Statistics, Mera Aspatal, LaQshya, PPP, fully IPHS Complaint, Under District Health Officer (DHO Admin), ESI, Central Govt. etc.)
- **Ownership Classification** (Public, Private)
- **Address of facility**
- **Latitude & Longitude**
- **Details of officer in-charge of facilities.**
- **Linked Facilities**
- **Providing Outreach services**

b. Reports

i. Dashboards

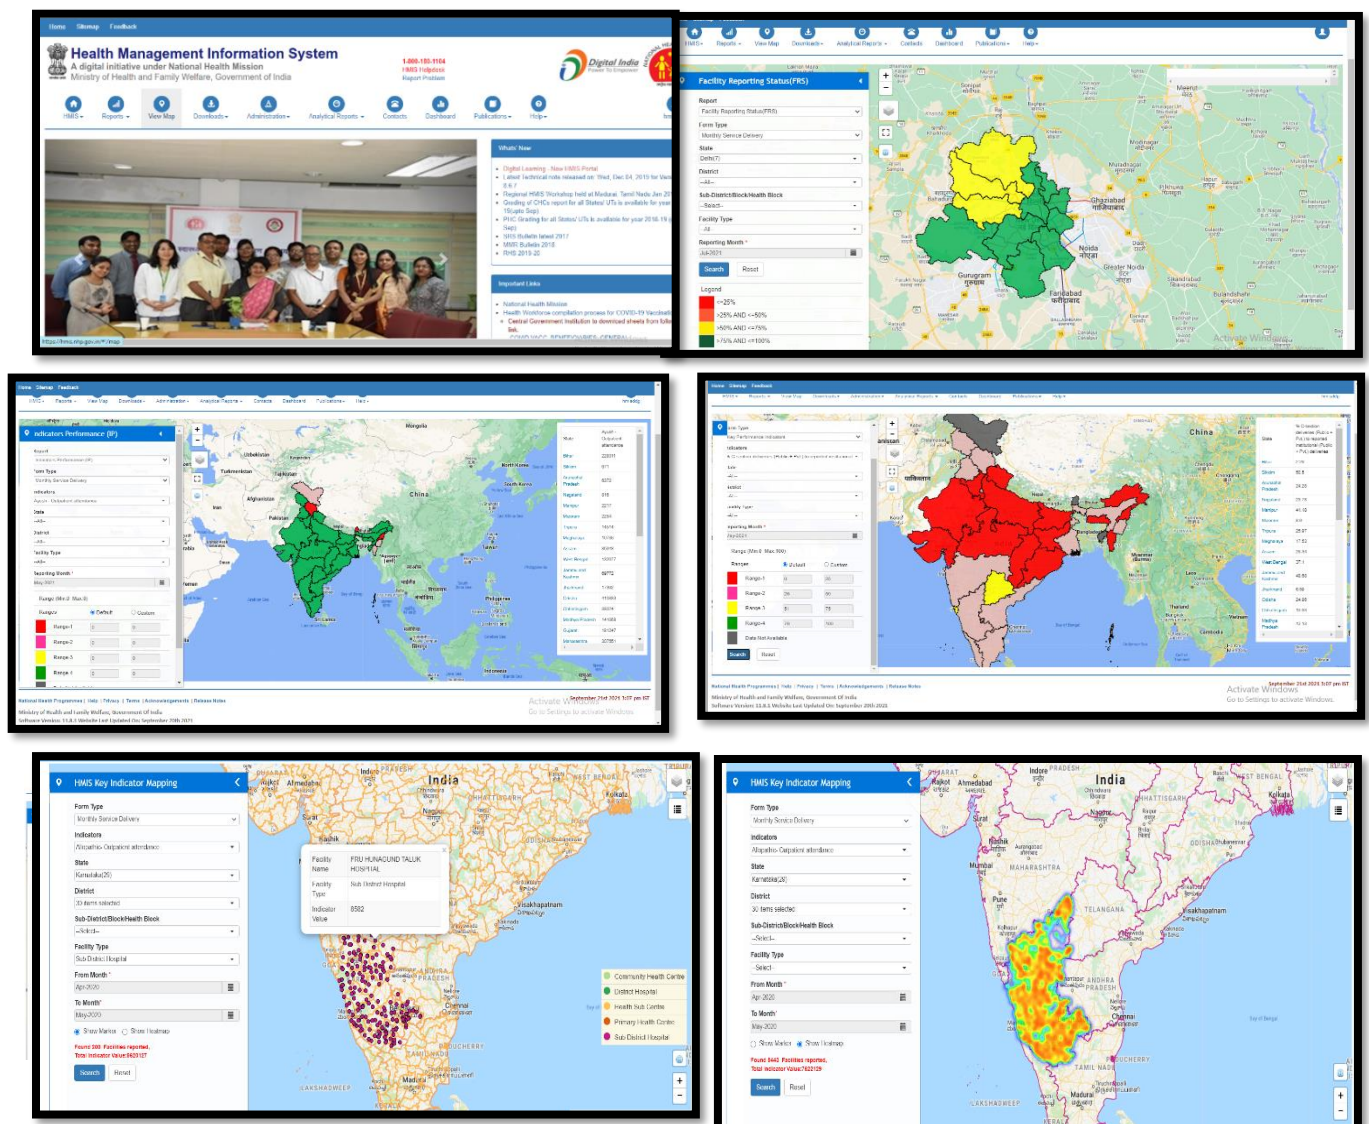

Graphical representation of data for important indicators is available from upto district level. The dashboard represents the data in a graphical manner and provide a glance of the performance on key indicators.

ii. GIS:

Using geo-spatiality feature the HMIS data is represented on a map. Multiple layers & boundaries are available in to the system. The Road and Village boundaries are also available.

Dos and Don'ts for Data Entry Operators:

Dos	Don'ts
• Timely and complete Data Entry in all the sections of format. • Always p-review the data before submitting. • Take a printout of the submitted data and get the signature of the facility in-charge. • Always review the Infrastructure & HR data for any changes during the month. • Be careful when entering the data about set and sub-set data elements. • Always look for validation errors and messages.	• Don't share facility credentials with anyone except the facility in-charge. • Don't open multiple websites while logging into the HMIS portal. • Don't enter data if not provided in the prescribed format for the respective facility.

Important Sensitive Indicators

The following data elements are very sensitive in nature and hence may be entered very consciously. A high number in these data elements is a sign of alarm. Concerned division / person may be consulted and correct data may be entered in portal.

- ✓ All Deaths
- ✓ Still Births
- ✓ Adverse Events Following Immunization
- ✓ Events following Sterilization
- ✓ Childhood Diseases: Diphtheria, AFP etc.

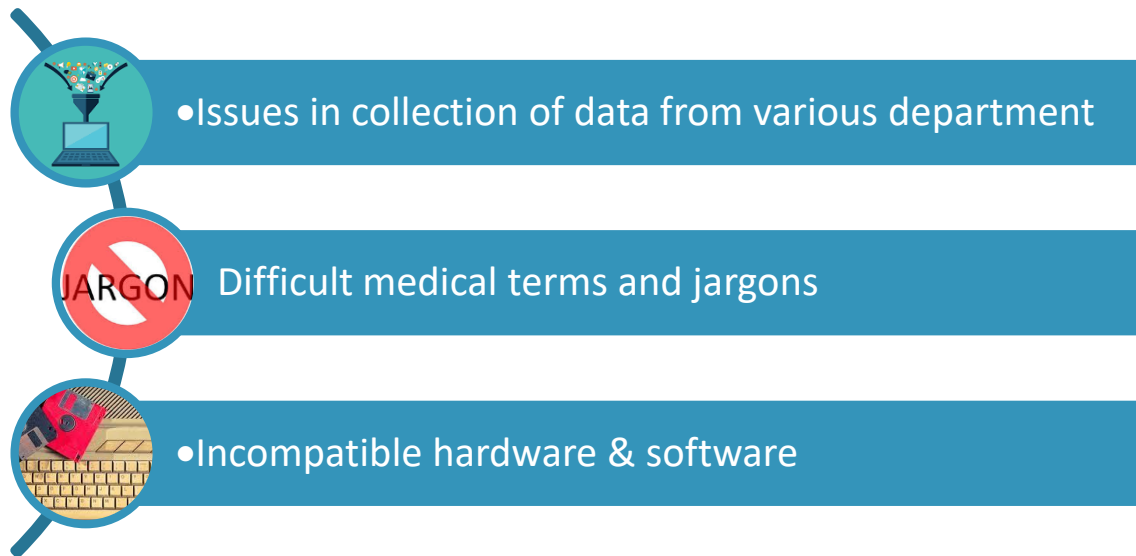

Other important key Indicators

There are certain key indicators, which are being used for monitoring the progress of the State/ District/ Facility

- ✓ 1st Trimester Registration
- ✓ Home Deliveries
- ✓ Institutional Deliveries
- ✓ Complications

Challenges in collection and uploading of HMIS data

There are many issues which, hinder the data entry in to HMIS portal. These are commonly faced by the HMIS nodal person while completing his duties.

How to overcome these?

- **Issues in collection of data from various department:** Try to fix a schedule and distribute formats to all concerned. If possible formulate a WhatsApp Group or on any other group all concerned and send reminder before the due date.
- **Difficult medical terms and jargons:** Try to get in constant touch with the respective Departments Heads/ Concerned Authorities to understand the meaning of the medical terms used in the format.

- **Incompatible hardware & software:** Try to get hardware and software which are updated and in good condition & update your systems with regular updates being provided by the concerned service provider.

Uses of HMIS Data

The HMIS data can be used for the following:

- **Monitoring and Evaluation:** The HMIS data is used to monitor the progress of various ongoing health programmes under National Health Mission (NHM) and to evaluate their effectiveness in achieving desired outcomes.
- **Health Planning and Policy Formulation:** The HMIS data collected helps in identifying gaps in health service delivery, disease burden and health system performance, which are used to develop health policies and programmes.
- **Resource Allocation:** The HMIS data helps in identifying areas of need and allocating resources to the areas that needed the most.
- **Emergency Response:** The HMIS data can be used to respond to health emergencies such as disease outbreaks, natural disasters and other health crises.
- **Source of Information:** The HMIS data is also used as an important source of information in the various platforms like Mission UTKARSH, Mission Sambhav etc.
- **Research:** The HMIS data can be used for research purposes to understand health trends, identify risk factors and develop new interventions & strategies to improve health outcomes.

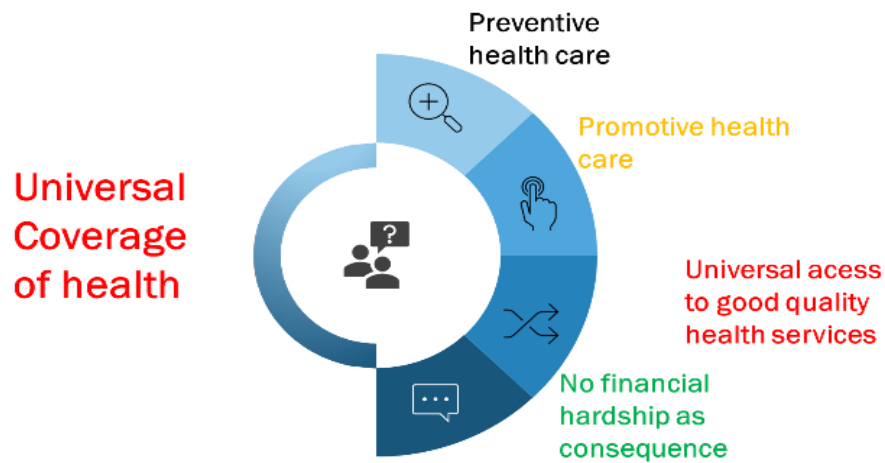

Consequences, if correct data is not uploaded

- **Effect on Quality of Healthcare:** If the data is inaccurate, it can be difficult to hold health providers and officials accountable for their performance. This can lead to a lack of transparency and accountability, which can affect the quality of healthcare.
- **Reduced trust in the healthcare system:** If the data is inaccurate or incomplete, it can erode public trust in the healthcare system. This can lead to reduced utilization of healthcare services, which can affect the schemes/programmes as well as outcomes
- **Inability to respond to emergencies:** Inaccurate data can hinder the government's ability to respond to health emergencies such as disease outbreaks, natural disasters and other health crises. This can result in delayed response times and inadequate allocation of resources, which can impair the situation.
- **Inaccurate planning and resource allocation:** If incorrect data is entered, it can lead to improper planning thereby resulting in misallocation of resources, which may have a negative impact on the quality of care.
- **Ineffective service delivery:** The HMIS is used to track the delivery of healthcare services in the health facilities, if incorrect data is entered, it would be difficult to identify areas where services are actually needed. Also, there may be challenges in monitoring the effectiveness of various health programmes.

Motivation for Uploading Data:

- **Actual performance of Health Facility:** The performance of facility would be reflected or highlighted by data entered by Data Entry Operators.
- **Recognition and Role modeling:** Helping in sending the performance of individual's health facility as well as all the health providers upto the higher level.
- **Helping in decision making:** Data entered leads to decision making at a higher level. The originator of the data, leads to policy formulation.
- **Different Roles of Data Entry Operator-** Data Entry Operator plays different roles such as an aide to Policy formulator, Researcher, Informed decision makers.

Attainment of highest possible level of health and well-being for all
